

■ CCI System
■ Editor

OVERVIEW

The "EDITOR" is a low cost remote or local editing station for distributed text entry and processing. The "EDITOR" is an IBM compatible PC that houses custom software designed specifically for the editorial environment.

CCI's menu system guides you through input, editing and file management activities. Editing and makeup features such as split screen, programmable keys, and undo/delete functions highlight the "EDITOR's" capabilities.

It supports most IBM PC compatible software such as spelling checker, adding versatility to an already powerful editorial tool.

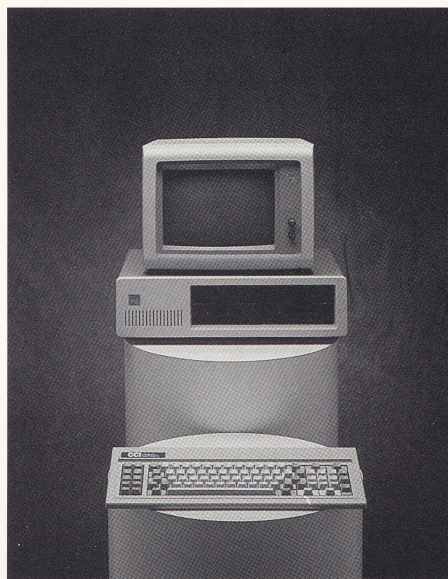

APPLICATION OVERVIEW

The "EDITOR" is designed for efficiency, speed and flexibility in a low cost editorial work station. Because of its IBM PC compatibility it fits into almost every working environment from the author's desk, to the home labor pool, to the typesetting department.

Commercial: The "EDITOR" allows multiple low cost input stations access to the CCI system for processing through the CCI software modules.

Inplant: The PC concept gives an editorial workstation the ease and flexibility of an already familiar input device coupled with the added punch of CCI software.

Special: The "EDITOR" uses the CCI TyComNet and auto dial feature to give immediate access to the CCI composition software and data files.

HIGHLIGHTS

- CCI Menu System
- Password Security
- Triple Function Split Screen
- Bi-directional Search
- Undo-Delete Features
- Local or Remote Job Storage
- Optional Spelling Check
- Automatic Dial
- CCI Command Support
- Save/Get Keys
- Help Screens
- Command Suppression
- Two-Way Error Checking
- Creates Standard PC DOS Files

FEATURES and BENEFITS

CCI H&J capability

Means files can be previewed for line endings, depth and positioning, significantly reducing need for paste up and multiple passes to the typesetter.

Password security

Allows the "EDITOR" to access the CCI system without jeopardizing the integrity of the user's Database.

Split screen

Enhances text display allowing files to be viewed simultaneously for comparisons and possible integration into a single file. This would be useful for preparation of magazine and tabloid work.

Command suppression

Permits a clean, unencumbered screen display for ease of input, editing and general terminal operation.

Undo/delete feature

Allows recovery of prior changes and data in the event of operator error during editing or makeup.

Error checking

To ensure that the data that you input is just as "clean" when it is output on the host CCI as it was when input on the EDITOR.

Local remote file storage

So you never exceed the ability to store any quantity of information.

SPECIAL CONSIDERATIONS:

Systems that support it: All. CCI Memory Considerations: None. Environmental: Office Modem Type: Internal/external Bell compatible. MUX channels: at least 1. Communications protocol: TyComNet. Other: Modem necessary for remote hook up (over 50 feet).
